

Subdivisions of T. 22 S., R. 11 W.

CHAINS

General Description

The greater portion of this township is mountainous, rough and broken; and with the exception of the northwestern portion, consists of an old burn, which is now covered with an almost impenetrable growth of thimbleberry, young fir, and alder, wildcherry, salmonberry, sallal, etc. A portion of secs. 5, 6, 7, 8, 17 & 18 is covered with old growth fir, alder, hemlock, cedar and spruce timber of fair quality.

There is considerable rich bottom land along Schofield and Dean's Creek, and some good marsh land along the Umpqua River.

The soil in the creek bottoms is a rich sandy loam and produces abundant crops when cleared and put into cultivation.

There are two settlers in sec. 5 (1 White and 1 Indian), two in sec. 7, one each in secs. 10, 11, and 15, and two in sec. 20.

The township is well watered by Schofield and Dean's Creeks and by numerous springs and streams of pure clear water.

Retracement of N. bdy. of T. 23 S., R. 11 W.
As surveyed by Albert N. Gould, Deputy Surveyor,
Under contract No. 762, dated July 12, 1905.

At the NE. cor. of sec. 1, which is a closing cor. of T. 23 S., Rgs. 10 & 11 W. heretofore described in my original notes.

Thence I ran

West, on true line bet. secs. 1 & 31 .

.17 To $\frac{1}{4}$ sec. cor. on S. bdy. sec. 31 which is a fir post, 12 ins. high firmly set, marked & witnessed as described by the Surveyor General.

7.66 To old closing cor. of T. 23 S., Rgs. 10 & 11 W. which is a sandstone 24x16x8 ins. which I marked A. P. witnessed
