CHAINS

Land, mountainous.
 Soil, rocky, 3rd rate.
 Dense undergrowth of huckleberry, alder and vine maple.
 Land, mountainous or covered with dense undergrowth, 116.
 00 chs.

August 4, 1906.

General Description

The portions of this township subdivided by me is practically all mountainous, consisting of high mountains terminating in sharp ridges. The streams have little or no valley. The soil is decomposed sandstone, mixed with vegetation, and is from 2 to 4 feet deep, and where mountains are denuded of trees, the soil washed off leaving the ground bare.

The rock readily crumbles when exposed to the air, so, except in a few cases as around Loon Lake, I have found it unwise to use it for corners.

There are no minerals apparent.

Loon Lake is a body of water evidently formed by an immense landslide ages ago. Mill creek, the outlet, is about 50 ft. wide, and descends rapidly for about 60.00 chs. having a total fall of about 200 ft.

Most of the township was burned over some 40 or 50 years ago, and is now grown up to second growth timber, principally fir.

There are four settlers in this township who have substantial improvements. John Salander in sec. 11, Geo. E. Shafer in sec. 2, Ella McClay in sec. 8 and I. N. Price in sec. 33.

The improvements of I. N. Price are not visible from any section line.
