

Subdivisions of T 24 S. R 7 W. W.M.

CHAINS

nearly all mountainous, and covered with a dense growth of timber and brush.

There is some rich bottom land along the Umpqua River and some of it's larger tributaries which would produce abundant crops if cleared and put in cultivation.

There are also a few small tracts of bench land on the mountains which would produce crops if cleared of the timber and brush.

The remainder is rough and broken; the soil is rocky and can be classed as 4th rate. The rock is sandstone, and underlies the whole township.

It is well watered with numerous springs and streams, tributaries of the Umpqua River, which winds it's way through the township, from South to North.

The timber is mostly fir, with some cedar, hemlock, alders laurel, and oak, and may be classed as second in quality.

There are three settlers in sec. 4, one in sec. 8, one in sec. 10, and one in sec. 22.

W. R. Whipple,

U. S. Deputy Surveyor.

Correction and Explanation of the survey of the lines of T 24 S R 7 W., W.M., as surveyed by Williams R. Whipple, U. S. Deputy Surveyor, under Contract No. 622, dated June 23, 1893.

Cor. to secs. 27, 28, 33 and 34.

F T bears S.70\*E., not S.50\*E.

A W Oak, 30 ins. diam., bears N.20\*E., 537 lks. dist., with scars where surveyors marks have been put on and overgrown with new wood.

June 16, 1896.
