

Subdivisions of T. 26 S., R. 1 W., W.M.

CHAINS

A fir, 5 ins. diam., bears S.61*W., 27 lks. dist.,
marked $\frac{1}{2}$ S 6 B T.

September 19, 1910.

General Description

This township is mountainous over its whole extent. It is extremely rough and broken except in the southern part where there is a high plateau of comparatively smooth land, covered for the most part with a magnificent growth of timber, and in the northwestern part where there are comparatively level benches and easy slopes.

The North Umpqua river runs southwesterly through the township, about one third of the township lying on the north and two thirds on the south side of the river.

The land sloping to the south side of the river is very rough and often precipitous. The slopes on the north side are steep and rocky but not precipitous.

The North Umpqua river through this township is a swift stream, carrying a large volume of water and has great water power possibilities.

The township contains little land suitable for agriculture. The soil where not rocky is of good quality. There are three settlers in the township, all on the North side of the river.

J. D. Martin in sec. 10 has two houses, one 20 x 12 ft, with porch 10 x 12 ft; the other 16 x 16 ft. Barn 20 x 20 ft., 20 acres cleared and seeded, $\frac{1}{2}$ acre orchard, 50 rods picket fence, 60 rods wire fence; approximate value of improvements, \$1500.
