	<p style="text-align: center;">General Description</p> <p>This township is mountainous, rising from the North Umpqua River, which flows through the middle of the township from east to west at an elevation of 1150 ft., to the summit of the divides on the north and south an elevation of 4000 ft. The formation is all basalt or similar rocks, with numerous rim rocks, steep ridges and deep canyons. There are also frequent benches or moderate slopes suitable for agriculture.</p> <p>The township is well timbered with a good quality of fir, cedar, sugar pine and hemlock with maple, yew, madrona and alder in lesser quantities. In most parts the timber shows the affects of old burns, the stands being irregular</p>
