

Subdivisions of T. 26 S., R. 3 W.

CHAINS

The bottom lands near the river and branches are usually of an excellent quality. The North Umpqua River is a bold, rapid stream, running through the township from East to West, and usually overflows its banks in times of high water. There are falls of about 10 or 15 feet, say, one mile West from the East boundary of township, where the Indians have an extensive salmon fishery, also a kind of village on the North side of the river.

We observed in sec. 17, on the left bank of river, stone, coal, apparently of a good quality. Coal has been quarried on the North side of river in secs. 9 and 17.

We observed in sec. 19, in the East bank of river, a little North of the junction of North Umpqua River and the "East Fork", an extensive bed of muscle and other shells, which were apparently formed or grown in salt water.

Land, stone is the prevailing rock in this township. Timber is abundant, containing fir, sugar pine, cedar, pitch, pine, white and black oak, ash, maple and laurel.

Subdivisions of T. 26 S., R. 3 W.  
As surveyed by L. L. Williams & A. R. Flint, Deputy Surveyors. Under contract No. 151, dated May 23, 1871.

Va. 21\*E.

- North, on line, bet. secs. 35 and 36.
- 35.00 Wet marshy land, commences.
- 38.00 Wet marshy land, ends.
- 40.00 Set post for  $\frac{1}{4}$  sec. cor. from which
  - A fir, 30 ins. diam., bears S. 45\*E., 14 lks. dist.
  - A fir, 15 ins. diam., bears N. 75\*W., 45 lks. dist.
- 74.15 Creek, 15 lks. wide, course S. 75\*W.
- 80.00 Set post to cor. of secs. 25, 26, 35 and 36 from which
