Soil, second rate.

Timber, Oak and Fir.

September 22, 1854.

This Township is composed of high rolling land, some bald points, but generally Oak slopes. Along the South and West boundaries are high mountain ridges covered with Fir, Pine and Cedar. The average of the soil is second rate. The principal part of the Township is drained by Ten Mile Creek. The head waters of which flow from the spurs of Cow Creek mountains.

Nathaniel Ford,

Deputy Surveyor.
