Land, mountainous.

Soil, rocky loam, 3rd rate.

Timber, fir, and madrone.

Undergrowth, vinemaple and dogwood.

GENERAL DESCRIPTION.

This township lies within the Umpqua National Forest and is very rough and mountainous, ranging in elevation from 1,000 ft. on the North Umpqua River to 5,000 ft. above sea level on the highest points.

The soil is a shallow rocky loam and owes its fertility to a mixture of vegetable mold. This fractional township is covered with a dense growth of vinemaple, rhododendron, hazel brush and grass in small open glades in portions of this fractional township.

Fir, hemlock and cedar are found throughout the township and can be classed as merchantable timber. Pine, yew, alder, maple, cascara and madrone are also found in parts of this fractional township.

There are no settlers located in this fractional township but a Forest Service telephone station and store house are located in the SW. $\frac{1}{4}$ of sec. 32.

The North Umpqua River road traverses near the south boundary of sec. 31. Steamboat trail traverses through sec. 32. A Forest Service telephone line traverses along this road and trail and a telephone line also extends from the telephone station in sec. 31 to a lookout point in the SW. $\frac{1}{4}$ of sec. 32.
