

CHAINS

GENERAL DESCRIPTION

Soil in the area is composed of a sandy, clay loam, from a few inches to several feet in depth overlying a sandstone bedrock. The open areas, which are nearly all privately owned, are used as pasturage for sheep and cattle. The rest of the land is forested with fir, hemlock, cedar, maple, oak, alder, madrone, myrtle, chinquapin, and dogwood; with undergrowth of vine maple, hazel, arrowwood, poison oak, salmonberry, huckleberry, blackberry, salal, rhododendron and fern. The commercial timber on the privately owned lands has been, to a large extent, logged off.

No evidence of mineral deposits was noted in the area covered by the resurvey.

The average of a considerable number of readings throughout the area gives a value of $20^{\circ} 17'$ E. for the mean magnetic declination, with a range of $2^{\circ} 10'$ in local attraction.

CERTIFICATE OF CADASTRAL SURVEYOR

I, Floyd A. Brooks, hereby certify upon honor that, in pursuance of supplemental instructions bearing date of the 12th day of July, 1961, I have dependently resurveyed a portion of the south boundary and subdivisional lines, Township 22 South, Range 8 West, of the Willametter Meridian, in the State of Oregon, which are represented in the foregoing field notes as having been executed by me and under my direction; and that said survey has been made in strict conformity with said instructions, the Manual of Instructions for the Survey of the Public Lands of the United States, and in the specific manner described in the foregoing field notes.

Dated - Nov. 28, 1962

Floyd A. Brooks, Cad. Surveyor
