

County Surveyor's Record, Douglas County, Oregon

T. 23 S., R. 4 W.

CHAINS

about 700 feet to about 1,200 feet above mean sea level. The area is reached by way of good paved and graveled roads. The soil is rocky clay loam. The timber is primarily Douglas fir, red cedar, maple, madrone, myrtle, oak and alder, with sparse to dense undergrowth of young timber, hazle, ceanothus, arrowwood, huckleberry, salal, Oregon grape, poison oak, vines, ferns, and grasses. The south half mile drains to the southwest to Walker Creek and thence to Elk Creek. The north half mile drains northeasterly to Bennet Creek and thence to Elk Creek. There are no year round streams along the mile. No mineral desopits were noted, and the land is best suited to grazing and the raising of timber. A small farm is located about 10 chains east of the $\frac{1}{4}$ section corner, in section 3. The mean magnetic declination is 20° East.
