

County Surveyor's Record, Douglas County, Oregon

Remonumentation of a Corner Point, T. 21 S., R. 7 W.

CHAINS

section corner of sections 32 and 33 to 1,785 feet above sea level in the southwest quarter of section 28. The area is drained by Tom Folley Creek, Little Tom Folley Creek, Paradise Creek, and Little Paradise Creek, all draining southerly into the Umpqua River, and Halfway Creek draining northwesterly into Smith River.

Access into the area is gained by way of Paradise Ridge Road, Tom Folley Creek Road and a new road up Little Tom Folley Creek. These roads are all gravel surfaced forest roads, branching off of Oregon State Highway No. 38.

Timber in the area consists of fir, hemlock, cedar, maple, alder, and chinquapin with undergrowth of vine maple, salmonberry, huckleberry, hazel, arrowwood, salal, ceanothus, Oregon grape, poison oak, blackberry, and fern.

The soil is composed of a sandy, rocky, clay loam, from a few inches to several feet in depth, overlying a sandstone bedrock which is exposed in numerous outcroppings throughout the area.

No evidence of mineral was noted in the area covered by this survey.

The average of a considerable number of readings over all parts of the area gives a value of $20^{\circ} 24' E.$ for the mean magnetic declination. There is a range of $0^{\circ} 42'$ in local attraction.
