from which new bearing trees

A fir, 15 ins. diam., bears N. 38° W., 134 lks. dist., mkd. $\frac{1}{4}$ S23 BT.

A fir, 31 ins. diam., bears S. 77 $\frac{1}{2}$ ° E., 78 lks. dist., mkd. $\frac{1}{4}$ S26 BT.

GENERAL DESCRIPTION

The lands included in the notes of the foregoing survey are located about 1 $\frac{1}{2}$ miles west of Kellogg, Oregon. The area is drained by Mehl Creek, and its tributaries, which drain northerly to the Umpqua River, and the tributaries of Waggoner Creek which drain easterly into the Umpqua River. Elevation ranges from about 160 feet above sea level, where Mehl Creek crosses the line between sections 13 and 18, to about 1,062 feet above sea level on a ridge near the corner of sections 19, 24, 25, and 30.

Access is by way of Bullock Road, Mehl Creek Road, and a number of privately owned logging roads.

Soil in the area is composed of sandy clay loam from a few inches to several feet in depth. Most of the bottom lands along Mehl Creek, and some of the higher areas are used as pasturage for sheep and cattle. The remaining land is forested with fir, hemlock, cedar, maple, oak, madrone, alder, and willow timber; undergrowth consists of vine maple, hazel, arrowwood, salmonberry, poison oak, huckleberry, blackberry, ceanothus, scotch broom, Oregon grape, salal, and fern.

No evidence of mineral was noted in the area covered by the resurvey.

The average of a considerable number of readings throughout the area, gives a value of 19° 56' E. for the mean magnetic declination. There is a range of 0° 28' in local attraction.
