from which new bearing trees:

A fir, 8 ins. diam., bears S. 50° E., $53\frac{1}{2}$ lks. dist., mkd. T22S R8W C57 BT.

A fir, 6 ins. diam., bears S. $37\frac{1}{2}^{\circ}$ W., 90 lks. dist., mkd. T22S R8W S9 BT.

A fir, 10 ins. diam., bears N. 66° W., $53\frac{1}{2}$ lks. dist., mkd. T22S R8W C49 BT.

Reset the iron pipe alongside the iron post.

GENERAL DESCRIPTION

The area covered by the survey described in the foregoing field notes is located in the coastal mountains about 1 mile west of Elkton, Oregon. Access is by way of State Highway Number 38, along the right bank of the Umpqua River, and by way of a county road along the left bank of the river. A number of privately owned, gravelled or dirt roads extend away from the river.

The area is drained by the Umpqua River and a number of small tributaries. The elevation above sea level ranges from less than 100 feet along the Umpqua River near the east boundary of section 5 to more than 1,400 feet near the northeast corner of section 5. Soil in the area is a sandy clay loam, from a few inches to several feet in depth, overlying sandstone bedrock.

Timber consists of fir, hemlock, cedar, maple, alder, chinquapin, and madrone; with undergrowth of vine maple, hazel, arrowwood, salal, Oregon grape, ceanothus, salmonberry, huckleberry, blackberry, poison oak, and fern.

No evidence of mineral deposits were noted in the area covered by the resurvey.

A number of readings throughout the area gives a mean magnetic declination of $20^{\circ} 11'$ E., with a difference of $1^{\circ} 30'$ in local attraction.
