

County Surveyor's Record, Douglas County, Oregon

Dependent Resurvey of Line Btwn. Secs. 3 and 10, T. 33 S., R. 5 W.

CHAINS

from which new bearing trees,

A fir, 20 ins. diam., bears N. $69\frac{1}{2}^{\circ}$ E. 81 lks. dist.,
marked T33S R5W S3 BT.

A fir, 18 ins. diam., bears S. $7\frac{1}{2}^{\circ}$ E., 125 lks. dist.,
marked T33S R5W S10 BT.

A fir, 22 ins. diam., bears S. 28° W., 60 lks. dist.,
marked T33S R5W S9 BT.

Land, mountainous.

Soil, rocky clay.

Timber, fir, pine, cedar, oak, yew, chinquapin, and madrona.

Undergrowth, live oak, hazel, Oregon grape, salal, poison oak,
and fern.

GENERAL DESCRIPTION

The line between sections 3 and 10 lies across the ridge dividing the Umpqua River and Rogue River drainage areas in mountainous country about five miles east of U.S. Hwy. No. 99. The elevation above sea level varies between 2,200 feet and 2,800 feet. The eastern portion of the line drains into Tennessee Gulch, tributary to Quines Creek. The remaining part drains into Wolf Creek. This area is well timbered, where not logged, with Douglas fir, pine, oak, cedar, yew, madrona, and chinquapin, the fir predominating. Undergrowth, typical of the vicinity, consists of a medium dense growth of live oak, hazel, salal, Oregon grape, poison oak, and fern.

No improvements are located along the resurveyed line. No evidence of minerals was noted, although there is evidence of extensive earlier mining activity in this area.

The mean of several observations of the magnetic declination gives a value of $19^{\circ} 33'$ E.
