from which

A maple, 13 ins. diam., bears N. 49° E., 57 lks. dist., marked AP S13 BT.

Set a steel fence post, 6 ft. long, alongside the iron post.

Thence N. 12° 55' W., on line 7-1 of Tract No. 37.

Ascend 8 ft. over S. slope.

1.637 Angle point No. 1 of Tract No. 37 and point of beginning.

GENERAL DESCRIPTION

The lands included in the foregoing survey are situated in rough and mountainous terrain about 12 miles northeast of the town of Myrtle Creek, Oregon. Access is by way of a paved and gravelled County Road which extends along North Myrtle Creek, and by several dirt roads branching off from it.

The area is drained by North Myrtle Creek and its tributaries, and by Lee Creek and its tributaries. Elevations range from about 1,100 feet above sea level at North Myrtle Creek near the ¼ section corner of sections 23 and 24, to about 1,900 feet above sea level near the northeast corner of section 13.

Soil in the area is composed generally of rocky clay loam. Most of the privately owned lands have been logged. The dominant timber species are Douglas Fir, white fire, hemlock, cedar, yew, madrone, maple, chinquapin, oak, and dogwood; the undergrowth consists primarily of vine maple, poison oak, fern, ocean spray, Oregon grape, salal, willow, manzanita, blackberry and hazel.

There is considerable evidence of old mining operations throughout the area, however there were no mines noted in operation at this time.

The average of a considerable number of readings throughout the entire area gives a mean magnetic declination of 19° 45' E., with a range of 1° 45' in local attraction.
