

T. 22 S., R. 8 W., Willamette Meridian, Oregon

CHAINS

The lands included in the foregoing survey are located about five miles westerly from Elton, Oregon. Sections 19 and 29 are drained by the Umpqua River, Sawyer Creek, and numerous other small streams. Section 11 is drained by Paradise Creek and Little Paradise Creek. Elevation ranges from about 40 feet above sea level on the line between sections 20 and 29, to about 1040 feet above sea level on the line between sections 29 and 30. Soil in the area is composed of a sandy clay loam, overlying a sandstone bedrock which is exposed in numerous outcrops throughout the area.

Access into sections 19 and 29 is by way of Henderer Road along the left side of the Umpqua River, a public access road along Sawyer Creek, and a private access road. Access into section 11 is by way of State Highway No. 38 and a public access road along Paradise Creek. The bottom lands along the Umpqua River, Sawyer Creek, and Paradise Creek are either being used as cultivated land for hay and row crops or as open pasture for sheep and cattle. The more mountainous areas are forested with Douglas fir, hemlock, cedar, maple, alder, myrtle, chinquapin, white fir, ash, willow, oak, and madrone timber. Undergrowth consists of vine maple, salmonberry, arrowwood, hazel, huckleberry, thimbleberry, blackberry, salal, poison oak, Scotch broom, ceanothus, manzanita, rhododendron, and fern. The timber has been logged from various parts of the area.

No evidence of mineral deposits were noted in the area covered by the resurvey.

A number of readings throughout the area gives a mean magnetic declination of 20° 23' E., with a difference of 0° 56' in local attraction.
