      S 18 | S 17  
Cor. 1957

from which the remaining original bearing trees:

A fir, 35 ins. diam., bears N. 85° E., 23 lks. dist., with fragmentary scribe marks visible on bark blaze, and scribe marks T26S R7W S8 CS BT visible on bark blaze alongside.

A fir, 33 ins. diam., bears N. 85° W., 57-1/2 lks. dist., no marks remaining. (Record, 61 lks)

and bearing trees mkd. by Byron, in 1957

A hemlock, 8 ins. diam., bears S. 72° E., 52-1/2 lks. dist., with healed double balze.

A fir, 10 ins. diam., bears S. 84° W., 55 lks. dist., with healed double blaze.

A fir, 8 ins. diam., bears N. 68-1/2° W., 44 lks. dist., with healed double blaze.

Land, mountainous.

Soil, rocky clay.

Timber, fir, hemlock, cedar, oak, maple, myrtle, tan oak, and chinquapin; undergrowth, salal, hazel, rhododendron, Oregon grape, vine maple, and poison oak.

### General Description

The portion of township 26 South, Range 7 West, embraced in this survey is located about 5 miles south-westerly from the hamlet of Umpqua, Oregon. Access to the area is by way of the Hubbard Creek Road to the north and various other unimproved access roads to the south. The area is drained by Camp Creek and numerous smaller creeks which drain into Hubbard Creek which, in turn drains into the Umpqua River. Elevations range from 1040 feet above sea level along Hubbard Creek to about 2000 feet above sea level near the 1/4 section corner of sections 17 and 18. This area is valuable mainly for its timber with some grazing along creek bottoms. The forest cover is primarily fir, hemlock, cedar, maple, oak, tan oak, myrtle, alder, and chinquapin. The undergrowth consists of salal, hazel, rhododendron, vine maple, poison oak, fern, and Oregon grape.

No evidence of mineral deposits was noted along lines resurveyed.

A number of readings throughout the area gives a mean magnetic declination of 19° 15' E., with a variation of 0° 05' in local attraction.
