Land, mountainous.

Soil, rocky clay.

Timber, fir, hemlock, cedar, madrone, chinquapin, oak, maple, and pine; undergrowth, salal, rhododendron, vine maple, huckleberry, poison oak, live oak and ferns.

GENERAL DESCRIPTION

That portion of township 31 south, range 8 west, included in the foregoing resurvey, is located about 10 miles south of Camas Valley, Oregon. The area is drained by Cow Creek, flowing in a southerly direction, and a number of it's tributaries. Elevations range from about 1750 feet above sea level near the 1/4 section corner of sections 5 and 6, to about 3500 feet above sea level near the corner of sections 16, 17, 20, and 21.

The land is very mountainous throughout the township, Dutchman Butte being the highest point. The soil is rocky clay with some loam at lower elevations.

The timber consists of Douglas fir, hemlock, white fir, pine, cedar, madrone, maple, alder, yew, live oak, and chinquapin. The undergrowth is composed of vine maple, huckleberry, poison oak, live oak, salal, rhododendron, hazel, and reproduction.

Access is gained by Highway No. 42, from Camas Valley, and a number of dirt and gravelled roads from it. There are a number of logging roads extending throughout the area. No mineral deposits were noted.

The average of a considerable number of readings throughout the area resurveyed gives a value of 19° 30' East for a mean magnetic declination. There is a range of 1° 00' due to local attraction.
