from which

A hemlock, 47 ins. diam., bears N. 79 1/2° W., 53 lks. dist., mkd. W 1/16 S29 BT.

A hemlock, 22 ins. diam., bears S. 29 1/2° W., 109 lks. dist., mkd. W 1/16 S32 BT.

Descend 230 ft. over W. slope.

41.58 The cor. of secs. 29, 30, 31, and 32.

Land, mountainous.

Soil, sandy clay loam.

Timber, fir, hemlock, cedar, alder, and maple; undergrowth, wine maple, fern, hazel, salmonberry, salal, arrowwood, and braken fern.

## GENERAL DESCRIPTION

That portion of township 20 south, range 9 west included in the foregoing resurvey is located in Coos County, approximately 28 miles northeast of Reedsport, Oregon. Access to the area is gained by way of the Smith River Road, asphaltic surfaced, from Reedsport.

The terrain is predominately mountainous with elevations ranging from about 200 feet above sea level in the bottom lands along the Smith River, to about 1,000 feet above sea level near the center of section 32. The area drains generally north into the Smith River, flowing westerly.

The sandy clay loam soil supports the heavily timbered stands of fir, hemlock, cedar, alder, chinquapin, madrone, yew, and dogwood. The undergrowth is moderate to dense and consists of vine maple, arrowwood, hazel, rhododendron, salmonberry, huckleberry, manzanita, salal, Oregon grape, ceanothus, poison oak, and braken fern. No evidence of mineral deposits or mining activity were noted along the lines resurveyed.

A considerable number of readings throughout the area gives a mean magnetic declination of 20° 30' East. There is a range in declination of 2° due to local attraction.
