madrone; undergrowth, salal, fern, rhododendron, hazel,  
vine maple, and poison oak,

### GENERAL DESCRIPTION

The portion of township 26 south, range 8 west, that  
was surveyed, is located about 25 miles southwesterly  
from Sutherlin, Oregon. Access is gained by way of  
Hubbard Creek Road, a paved and gravelled road which  
extends westerly from sutherlin. The area is mountain-  
ous and is drained by Hubbard Creek and its tributaries.

Elevations range from about 550 feet above sea  
level in the eastern portion of section 1 to about 2,550  
feet above sea level in the southwestern portion of sec-  
tion 13.

Soil consists of rock, clay, and sandy loam which  
supports a vegetative cover to vine maple, salal, fern,  
rhododendron, poison oak, hazel, and ceanothus; and a  
timber cover of fir, hemlock, cedar, madrone, maple,  
alder, and chinquapin. No indication of mineral deposits  
was noted in the area.

The average of a considerable number of readings  
throughout the area gives a value of 19° 30' E., for  
the mean magnetic declination. There is a range of  
0° 30" in local attraction.
