15321

T. 32 S., R. 7 W., Willamette Meridian, Oregon

CHAINS

GENERAL DESCRIPTION

The lands included in this resurvey are located approximately five miles northwest of the small town of Glendale, Oregon. The area is very mountainous and broken. The elevations range from about 2,200 feet above sea level near the corner of sections 19, 24, 25, and 30, to about 4,000 feet above sea level near the summit of Grayback Mountain which is situated in the SE 1/4 of section 13. The divide between Cow Creek and Middle Creek drainages extends diagonally from northeast to southwest, separating the area surveyed nearly equally.

Access into the southern portion of the area is gained by way of McCollogh and Totten Creek Roads. The western portion of the project area is reached by Dads Creek Road.

The soil is rocky clay loam, except on the south slope of Grayback Mountain which is mostly loose rock and rock outcroppings, Timber covering this locality ranges from heavy to moderate, with stands of fir, pine, live oak, madrone, chinquapin, and cedar. The undergrowth is generally dense and consists of arrowwood, hazel, poison oak, fern and you-g evergreens.

There is no development in the area nor evidence of having been any in the past.

The only indication of mineral deposits is an abandoned mine near the 1/4 section corner of sections 14 and 23.

The average of a considerable number of readings throughout the area gives a value of 19° 30' E. for the mean magnetic declination, with a range of 1° 30' due to local attraction.
