Dependent Resurvey, Portion of Subdivisional Lines,
T. 30 S., R. 7 W., Willamette Meridian, Oregon

CHAINS

Land, mountainous.
Soil, rocky clay.
Timber, fir, hemlock, cedar, maple, oak, myrtle, alder,
and chinquapin; undergrowth, salal, vine maple, poison
oak, rhododendron, and fern.

GENERAL DESCRIPTION

The lands included in the notes of the foregoing re-survey, are located in mountainous terrain about seven miles southerly from the hamlet of Olalla, Oregon. The area is drained by Thompson Creek, Olalla Creek, and a number of their tributaries. The elevations range from about 1,000 feet above sea level near the $\frac{1}{4}$ section corner of sections 4 and 5, to about 2,900 feet above sea level near the triangulation station "Buck Mountain".

Access into the area is by way of a paved road branching from Highway Number 42, and by numerous gravelled roads.

Timber in the area consists of fir, hemlock, cedar, maple, myrtle, oak, chinquapin, and alder; with undergrowth of salal, Oregon grape, rhododendron, vine maple, poison oak, and fern.

The soil is composed of rocky clay loam, from a few inches to several feet in depth, overlaying a sandstone bedrock which is exposed in numerous outcroppings throughout the area.

No evidence of mineral activity was noted in the area covered by this resurvey.

The average of a considerable number of readings over all parts of the area gives a value of $18^{\circ} 45'$ E. for the mean magnetic declination. There is a range of up to $0^{\circ} 45'$ in local attraction.
