CHAINS

from which new bearing trees

A ponderosa pine, 36 ins. diam., bears N.  $47\frac{3}{4}^{\circ}$  E.,  
141 $\frac{1}{2}$  lks. dist., mkd.  $\frac{1}{4}$  S5 BT.

A fir, 9 ins. diam., bears S.  $37\frac{3}{4}^{\circ}$  W., 77 $\frac{1}{2}$  lks.  
dist., mkd.  $\frac{1}{4}$  S8 BT.

## GENERAL DESCRIPTION

The line resurveyed is located about 5 miles east of the community of Sunny Valley, Oregon. The area is mountainous and is drained by the tributaries of Grave Creek. Elevations range from about 3,200 feet above sea level to about 3,750 feet above sea level along the line resurveyed.

The soil is rocky clay suited primarily for grazing and growing of timber.

Timber consists of fir, pine, cedar, madrone, and oak; with undergrowth of poison oak, manzanita, ceanothus, vine maple, hazel, salal, and fern.

Access into the area is by way of dirt and gravelled roads leading from Coyote Creek and Grave Creek County Roads.

No evidence of mineral deposits or mining activities were noted along the line resurveyed, although there are numerous mining claims in the general area.

The average of several readings along the line resurveyed gives a mean magnetic declination of  $19^{\circ} 30'$  E. There is a range of  $2^{\circ}$  in local attraction.
