CHAINS

and bearing trees mkd. by John M. Jelley

A fir, 18 ins. diam., bears N. 80° E., 193 lks.
dist., with healed blaze.

A fir, 15 ins. diam., bears S. 69° W., 94 lks.
dist., with healed blaze.

A fir, 17 ins. diam., bears N. 18° W., 200 lks.
dist., with healed blaze.

Land, mountainous.

Soil, rocky clay loam.

Timber, fir, hemlock, cedar, madrone, maple, alder, oak,
and chinquapin; undergrowth, hazel, Oregon grape, poison
oak, huckleberry, salal, and fern.

GENERAL DESCRIPTION

The lands included in the foregoing survey are located approximately 8 miles southeasterly from the small town of Tenmile, Oregon. Access into the area is by way of a paved county road extending along Olalla Creek, and several dirt roads branching from it.

The area is drained by Bushnell Creek, Byron Creek, and a number of their tributaries which flow westerly into Olalla Creek. Elevations range from about 950 feet above sea level along Byron Creek in the northwest portion of section 27, to about 2,000 feet above sea level, near the southeast corner of section 34.

Soil in the area is composed generally of rocky clay loam. Timber consists primarily of fir and cedar, with stands of hemlock, pine, madrone, maple, chinquapin, oak, and alder. The undergrowth is mainly hazel, vine maple, poison oak, Oregon grape, huckleberry, blackberry, and fern.

There are several mining claims posted throughout the area resurveyed.

The average of a number of readings throughout the area gives a value of 19° 30' E. for the mean magnetic declination. There is a range of 1° in local attraction.
