	from which bearing trees mkd. by Corbin, in 1957
	A white pine, 10 ins. diam., bears N. 36° E., 19 lks. dist., with healed blaze.
	A madrone, 16 ins. diam., bears N. 52° W., 67 lks. dist., with healed blaze.
	and a new bearing tree
	A fir, 8 ins. diam., bears N. 18° E., 25 $\frac{1}{2}$ lks. dist., mkd. $\frac{1}{4}$ S4 BT.
	Land, mountainous.
	Soil, rocky clay.
	Timber, fir, hemlock, cedar, maple, oak, madrone, alder, and chinquapin; undergrowth, salal, vine maple, poison oak, hazel, and fern.
	GENERAL DESCRIPTION
	The land included in the foregoing survey is located approximately 13 miles southeast of the town of Glide, Oregon. The area is drained primarily by Little River which drains westerly through the southern portion of section 3. The land is mountainous, with elevations ranging from about 1,200 feet above sea level along Little River, to about 1,600 feet above sea level near the corner of sections, 2, 3, 10, and 11.
	A paved road along the north bank of Little River and passing through a small community in the southwest portion of section 3, provides the main access into the area. Numerous logging roads provide additional access into the area.
	The soil types vary from rock outcroppings and rocky clay, to loam in the bottom lands along Little River. Timber consists of fir, hemlock, cedar, pine, madrone, and maple. The undergrowth is vine maple, poison oak, salal, and fern.
