CHAINS

The following field notes are those of the dependent resurvey of a portion of the Seventh Standard Parallel South (south boundary of township 32 south, range 7 west) and a portion of the subdivisional lines, and subdivision of section 3, township 33 south, range 7 west, Willamette Meridian, Oregon.

The history of surveys pertaining to this resurvey, is as follows:

The Seventh Standard Parallel South (south boundary of township 32 south, range 7 west) and a portion of the subdivisional lines, township 33 south, range 7 west, were surveyed by William H. Byars, in 1882.

The north four miles of the west boundary of the township and that portion of the subdivisional lines needed to complete the township were surveyed by Oscar F. Thiel, in 1901.

The 1/4 section corner of sections 7 and 8 and certain other original corner points on the west boundary of the township were remonumented without survey by Joseph S. Gawron, in 1966.

The boundaries of section 1 were resurveyed and the section subdivided by John M. Jelley, Rollin D. Aanrud, and Lynn M. Roseberry, in 1969-70.

The survey was executed in accordance with the specifications set forth in the Manual of Surveying Instructions, 1973, and the Special Instructions dated June 10, 1974, under Group Number 845, Oregon.

The directions of the lines were determined by the solar transit method and by deflections from azimuths obtained by direct solar observations.

Preliminary to the resurvey, the lines of the original survey were retraced and search was made for all corners and other calls of the record. Identified corners were remonumented in their original positions. Lost corners were reestablished and remonumented at proportionate positions based on the official record. The retracement data were thoroughly verified and only the true line field notes are given herein. All lines not forming a closure were measured twice. Only those lines bounding or crossing public lands were blazed.

The geographic position of the corner of sections 16, 17, 20, and 21, as scaled from the Galice, Oregon, quadrangle map, published by the United States Geological Survey, in 1946, is as follows:

Latitude 42° 41.7' N. Longitude 123° 32.5' W.

The mean magnetic declination is 19° 15' E.

Dependent Resurvey of a Portion of the Seventh Standard Parallel South (South Boundary, T. 32 S., R. 7 W.) Willamette Meridian, Oregon

(Restoring the survey by William H. Byars, U. S. Deputy Surveyor, in 1882)
