from which new bearing trees

A fir, 7 ins. diam., bears N. 48 1/4° W., 38 lks. dist., mkd. 1/4 S16 BT.

A fir, 6 ins. diam., bears S. 48 3/4° E., 61 lks. dist., mkd. 1/4 S21 BT.

Corner is located in cut bank at W. edge of an abandoned dirt road, 25 lks. wide, bears NE. and SW.

GENERAL DESCRIPTION

The lands included in the foregoing resurvey are located approximately 12 miles northwesterly of Glendale, Oregon. Access is by way of an asphalt surfaced road along Cow Creek, with several gravelled or dirt roads branching from it. The Southern Pacific Railroad tracks extend across the township along Cow Creek.

The area is mountainous, with elevations ranging from about 1000 feet above sea level on the line between sections 18 and 19 on Cow Creek, to about 2500 feet above sea level near the 1/4 section corner of sections 15 and 16. The main drainage is Cow Creek, which flows northwesterly through the township. There are numerous smaller creeks which drain into Cow Creek.

The soil is composed generally of rocky clay. The timber consists of fir, pine, cedar, oak, madrone, chinquapin, maple, and alder. The undergrowth is chiefly poison oak, manzanita, ceanothus, hazel, vine maple, huckleberry, salal, and Oregon grape.

There were no mineral deposits noted along the lines surveyed.

The average of several readings along the lines resurveyed gives a mean magnetic declination of 19° 30' E. There is a range of 4° due to local attraction.
