Timber, fir, hemlock, cedar, madrone, chinquapin, pine, yew, alder, maple, and oak; undergrowth, vine maple, hazel, arrowwood, huckleberry, salal, Oregon grape, poison oak, fern, rhododendron, manzanita, blackberry, and young timber,

GENERAL DESCRIPTION

The lands included in the foregoing resurvey are located in mountainous country about 10 miles southwest-erly from Riddle, Oregon, in Douglas County. The eleva-tion ranges from about 1350 feet above sea level near the 1/4 section corner of sections 3 and 10, to about 2000 feet above sea level near the corner of sections 10, 11, 14, and 15.

The area is drained by Cow Creek, Iron Mountain Creek, and numerous small and seasonal drainages. The soil consists of a rocky clay. The lands are forested with fir, hemlock, ash, oak, pine, cedar, yew, maple, chinquapin, alder, and madrone. The undergrowth consists of vine maple, poison oak, rhododendron, huckleberry, blackberry, Oregon grape, fern, manzanita, salal, hazel, arrowwood, and young timber.

Access into the area is gained by way of an asphalt surfaced road along Cow Creek and a number of gravelled and dirt roads extending into the area.

There were no mineral deposits noted along the lines resurveyed.

The average of a number of readings throughout the area gives a value of 19° 45' E. for the mean magnetic declination. There is a range of 0° 30' due to local attraction.
