from which a new bearing tree

A fir, 13 ins. diam., bears N. 11° E., 34 1/2 lks. dist., mkd. T33S R7W S7 BT.

Deposit the corner stone alongside the iron post.

Land, mountainous.

Soil, rocky clay.

Timber, fir, pine, cedar, oak, madrone, chinquapin, maple, and alder; undergrowth, poison oak, manzanita, huckleberry, hazel, salal, Oregon grape, and young timber.

**GENERAL DESCRIPTION**

The area covered by this survey is located approximately 9 miles southwesterly of Glendale, Oregon. The northern portion of the area is drained by Perkins Creek, and numerous smaller creeks which flow northerly to Cow Creek. The main drainages in the southern portion are Poorman Creek, Rock Creek, and Reuben Creek, which flow southerly to Grave Creek. Access is by way of roads which follow the main drainages.

The area is mountainous, being very steep and broken. elevations range from about 700 feet above sea level on Grave Creek, to about 3000 feet above sea level near the E. 1/16 section corner of sections 19 and 30.

The soil is composed of rocky clay. Timber consists primarily of fir, with stands of pine, cedar, oak, maple, madrone, chinquapin, and alder. Undergrowth is poison oak, manzanita, huckleberry, vine maple, hazel, white thorn, salal, Oregon grape, and young timber.

There were no mineral deposits noted along the lines surveyed. There has been extensive mining carried on in the past.

The mean magnetic declination is 19° 30' East, with a variation of 2° in local attraction.
