- 26.30 Spur, slopes S. 30° W.; desc. over broken SW. slope.
- 40.08 The S 1/16 sec. cor. of secs. 32 and 33.

GENERAL DESCRIPTION

The area covered by this resurvey is located about one mile northwest of Yoncalla, Oregon. The area resurveyed is located in mountainous country with elevations ranging from about 1,200 feet above sea level near the S 1/16 section corner of sections 32 and 33, to about 400 feet above sea level at the corner of sections 27, 28, 33, and 34. The area is drained by small and seasonal drainages, draining easterly to Yoncalla Creek. The soil varies from a sandy loam in the low elevations to a clay loam in the higher elevations.

The timber consists mainly of fir, hemlock, yew, oak, cedar, pine, madrone, alder, maple, chinquapin, and ash. The undergrowth is made up of Oregon grape, salal, poison oak, arrowwood, hazel, blackberry, ferns, huckleberry, wild rose, vine maple, and young timber.

The area resurveyed is reached by way of State Highway No. 99, with numerous paved, gravelled, and dirt access roads scattered throughout the area. The land is mainly used for timber. No mineral deposits were noted during the resurvey.

An average of a number of readings along the lines resurveyed, gives a value of 19° 00' East for the mean magnetic declination. There is a range of 1° due to local attraction.
