

County Surveyor's Record, Douglas County, Oregon

17395

T. 20 S., R. 9 W., Willamette Meridian, Oregon

CHAINS

The following field notes are those of the dependent resurvey of a portion of the subdivisional lines, subdivision of sections 10, 22, and 33, and the metes-and-bounds survey of Lot 7 in section 33, township 20 south, range 9 west, Willamette Meridian, Oregon.

The history of surveys pertaining to this resurvey, is as follows:

A portion of the south and west boundaries and subdivisional lines was surveyed by William Thiel, U. S. Deputy Surveyor, in 1877.

A portion of the north, south, and west boundaries and subdivisional lines was surveyed by William Thiel, U. S. Deputy Surveyor, in 1891.

A portion of the boundaries of section 22 was retraced by W. F. Briggs, Special Inspector of Surveys, in 1892.

The south boundary was retraced by Alonzo Gesner, U. S. Deputy Surveyor, in 1894.

A portion of the north and west boundaries and subdivisional lines was resurveyed and the survey of the subdivisional lines was completed by Fred Mensch, Cadastral Engineer, in 1921-22.

The south boundary, and portions of the north and east boundaries and subdivisional lines were resurveyed by Thomas Tillman and Joseph S. Gawron, Cadastral Engineers, in 1953-54.

A portion of the south boundary was resurveyed by Peter A. Peterson, Cadastral Surveyor, in 1966-67.

Certain original corner points were remonumented without survey by William W. Glenn and James E. Jelley, Cadastral Surveyors in 1967.

A portion of the subdivisional lines was resurveyed by Owen C. Chatters, II, Cadastral Surveyor, in 1972.

A portion of the subdivisional lines was resurveyed and section 27 was subdivided by Harvey E. Wofford, Cadastral Surveyor, in 1982.

The survey and resurvey were executed in accordance with the specifications as set forth in the Manual of surveying instructions, 1973, and Special Instructions dated May 1, 1984, under Group Number 1209, Oregon.

The directions of the lines refer to the true meridian as determined by deflection angles turned from azimuths obtained by direct solar observations.

Preliminary to the resurvey, the lines of the original survey were retraced and search was made for all corners and other calls of the record. The retracement data were thoroughly verified, and only the true line field notes are given herein. All lines not forming a closure were measured twice to preclude error. Only those lines bounding or crossing public land were blazed.
