over broken S. slope.

13.75 Gravelled road, 25 lks. wide, bears N. 75° W. and
S. 75° E.

23.55 Spur, slopes SW.; desc. over broken NW. slope.

28.95 Ravine, drains SW.; asc. over broken SW. slope.

39.90 The E 1/16 sec. cor. of secs. 26 and 35.

GENERAL DESCRIPTION

The land involved in the foregoing survey is located in Douglas County approximately 4 miles south-westerly of Kellogg, Oregon. The area is extremely mountainous with elevations ranging from about 400 feet above sea level near the $\frac{1}{4}$ section corner of sections 35 and 36, to about 1,440 feet above sea level near the corner of sections 34 and 35, on the south boundary of the township.

Access into the area is by several gravelled roads branching off Bullock Road on the west side of the Umpqua River. This area is drained by numerous creeks which flow into Waggoner Creek draining easterly. The soil being of rocky clay loam supports an abundance of timber, consisting of fir, cedar, hemlock, alder, and maple; and undergrowth of blackberry, poison oak, fern, salal, arrowwood, and huckleberry.

No evidence of mineral deposits was noted in the area covered by this survey.

The average of a considerable number of readings throughout the area gives a value of 19° E. for the mean magnetic declination. There is a range of up to 1° due to local attraction.
