      1989

from which

A stainless steel post, 28 ins. long, 2½ ins. diam., set 28 ins. in the ground, for a reference monument, bears S. 88° 51' E., 167.4 lks. dist., with brass cap mkd. RM T19S R9W S7 CC 110.5 FT TO COR 1989 and an arrow pointing to the corner.

and a bearing tree mkd. by Alan D. Reid, U.S. Forest Service Forester, in 1958, record held at Mapleton Ranger Station

A fir, 17 ins. diam., bears N. 72½° W., 7½ lks. dist., with healed blaze.

and bearing trees of no known record

A fir, 25 ins. diam., bears S. 51½° E., 111 lks. dist. with healed blaze and a U.S. Plywood tag dated 1975.

A fir, 20 ins. diam., bears S. 12¼° W., 115 lks. dist., with healed blaze and a U.S. Plywood tag dated 1975.

Deposit white "DEEP-1" magnetic marker at base of stainless steel post.

From this same point, the cor. of secs. 1 and 12 only, T. 19 S., R. 10 W., bears S. 0° 44' 30" W., 9.870 chs. dist., hereinbefore described.

## GENERAL DESCRIPTION

That portion of the township covered by this resurvey is located in the North Fork Smith River drainage about seven miles south-southeast of the town of Mapleton and 15 miles northeast of Gardiner. The area in the north is reached by way of State Highway No. 126, Sweet Creek and Hadsall Creek County Roads, all paved, by numerous public and private gravel roads, dirt roads, and Kentucky Falls Trail. The area in the south is reached by way of Highway 101, Smith River and North Fork Smith River County Roads, all paved, and by United States Forest Service gravel and dirt roads.

The area lies in the Coast Range of mountains within Douglas and Lane Counties. The terrain is steep and mountainous. The soil is sandy clay loam from a few inches to several feet in depth overlying a sandstone bedrock. There are numerous basalt outcrops. The timber consists mostly of second growth with some old growth in evidence, and made up of Douglas fir, hemlock, maple, alder, cedar, spruce, cherry and chittum. The undergrowth is very dense and consists of huckleberry, salal, vine maple, rhododendron, salmon-berry, thimbleberry, hazel, Oregon grape, fern and devil's club.

The land is valued for habitat, timber resources and recreation. The public land is within the Siuslaw national Forest, administrated by the Mapleton Ranger District. The United States Forest Service has developed a trail down Kentucky Creek to it's junction with North Fork Smith River. The trail ends at the base
