Rule for correcting random lines. When the correction does not exceed 200 links to each mile

Rule for ½ mile

From the number of links to be corrected in 40 ch
Substract ½; the difference will be the number of minutes of a degree required for the correction of the course

Example

No of links to be corrected,

142 − 42 = 6 − 42 − 36'

For each

from ½ the no of links to be corrected. Substract

½ the difference will be the No of Minutes to correct the course of the line

Example

No of links to be corrected,

70 ÷ 2 = 35 − 5 = 30' answer
